
1 Source-only search
SecReq: 510 rows; five stratified row-level splits
Pool: 153 rows Validation: 153 rows Test: 204 rows
pool and validation only
PE2 / BT-APE: 20 proposals per trajectory
Pool labels guide proposals; validation weighted-F1 selects p^*
3 producers × 2 optimizers × 5 source splits
Freeze definitions and historical selection
30 source winners; 380 cell-local unique candidates, including p_0
2 Frozen target evaluation
no target feedback to search
GitReq: 6,302 items from 4,080 repositories
Evaluate frozen prompts on full and NFR-only views
RQ1: p_0 and p^*
Original models
Paired endpoint gains
RQ2: candidate pool
Original models
Ranking and source-selection loss
RQ3: source winners
Seven deployers
Cross-model gains over deployer p_0
3 Conditional diagnostics
Same source-test partitions
Original: p_0, p^* only
Post-hoc: all frozen candidates
204 rows per split; no reselection
Target-supervised comparator
Select within the frozen pool
Repository-held-out evaluation
Diagnostic, not source-only use
